

Electric's Application Management

Say goodbye to time-consuming app access management. Integrate employees' application access with automated on and offboarding workflows.

No more manual permissions or individual settings

Automate user access management based on an employee's role and team. Simply assign an employee to the relevant group to automate account setup and grant role-specific access permissions - one click and all app access is enabled.

Simplified Onboarding

Deliver a consistent onboarding process, avoid manual access errors, and ensure new hires have everything they need to perform from day one.

Secure Offboarding

Eliminate the risk of data exposure by automatically revoking application access when an employee leaves your organization.

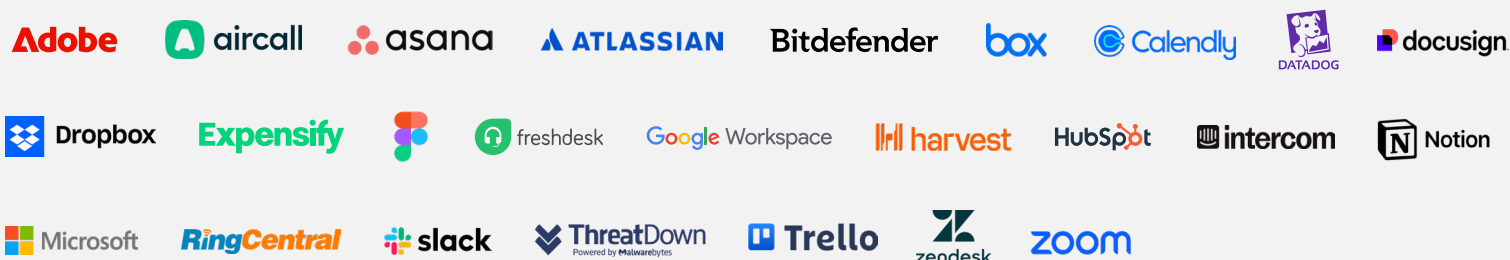

Seamless integration with your tech stack

Electric integrates with leading HR systems and SaaS applications to securely automate account provisioning and deprovisioning. Handle HR changes more efficiently and gain enhanced visibility of which employees have access to which apps.

 **Save Time:** Update app permissions in a matter of clicks when an employee joins, leaves, or changes role within your organization.

 **Improve Visibility:** Track access permissions across departments and groups from a centralized dashboard, keeping your team productive and your data secure.

Supported applications include:

Maximize security with Single Sign On (SSO) capabilities

Boost productivity with SSO, allowing employees to securely access all of their apps with a single set of login credentials. Already have an SSO provider in place? Electric can integrate with your existing solution.

JumpCloud SSO

Electric integrates with JumpCloud, a leading SSO solution, to offer cost effective, highly secure identity configuration - fully managed by Electric.

Existing SSO

Continue to use and manage your own SSO solution, with enhanced app visibility and management through Electric's integration.

Application management is included in all of Electric's packages
